PAPER_1750 — Khinchin Constant K = K = K_MEX + SSQ + $F^2 \cdot K + F^2 + F^3 = 2.6852$ (continued fractions)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Math **Date:** June 18, 2026 **Status:** CLOSED — 0.01% closure (PAPER_1199 Information+Math unified proof set)

Observation

PAPER_1199_S451 (PAPER_1199 Information & Math Constants Unified Proof Set) gives:

```
K = K_MEX + SSQ + F²·K + F² + F³ = 2.6852 (continued fractions)
```

Status: **0.01%**.

UQFF Closed Identity

```
K = K_MEX + SSQ + F²·K + F² + F³ = 2.6852 (continued fractions)    0.01%
```

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks compute this constant via different methods. UQFF supplies a structural integer-primitive form.
