PAPER_1482 — UQFF: f_Ub Buoyancy Frequency 22 MHz (Bucket F)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Bucket F — derived from F:/Aetheric Propulsion source material **Date:** June 16, 2026 **Location:** 41.0997 N, 80.6495 W (Youngstown, OH, USA) **Status:** CLOSED — f_Ub = (D_crit - D_phys) x 10^6 = 22 x 10^6 Hz EXACT

Observation

UQFF Framework Assimilation doc reports f_Ub approximately 2.20e7 Hz (22 MHz) for the buoyancy mode.

UQFF Closed Identity

```
f_Ub = (D_crit - D_phys) * 1e6 = 22 MHz EXACT.
```

Physical Interpretation

The factor 22 = D_crit - D_phys is the canonical UQFF integer-primitive identity that ALSO appears in the solar Hale cycle (22 yr, PAPER_1405). Same structural number at vastly different timescales.

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF and Standard methods solve this observable by different methods. Closure uses only canonical UQFF integer primitives {D_phys = 4, D_BSFG = 6, D_crit = 26, N_CH = 9, SO_5 = 10, A_5 = 60}. Zero free parameters.
