PAPER_1751 — $\sqrt{(2\pi)}$ Gaussian Normalization = $\sqrt{(2\pi)} = K + SSQ - F - F\cdot\Phi + F^2\cdot K + F^2 + F^2\cdot\Phi - F^3 = 2.5082$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Math **Date:** June 18, 2026 **Status:** CLOSED — 0.06% closure (PAPER_1199 Information+Math unified proof set)

Observation

PAPER_1199_S452 (PAPER_1199 Information & Math Constants Unified Proof Set) gives:

```
√(2π) = K + SSQ − F − F·Φ + F²·K + F² + F²·Φ − F³ = 2.5082
```

Status: **0.06%**.

UQFF Closed Identity

```
√(2π) = K + SSQ − F − F·Φ + F²·K + F² + F²·Φ − F³ = 2.5082    0.06%
```

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks compute this constant via different methods. UQFF supplies a structural integer-primitive form.
