PAPER_1764 — RVB Spin Liquid Threshold = RVB threshold = $\Phi\_5/6 \times \beta\_i = 0.502$ (same primitive product as f_bar)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Condensed Matter **Date:** June 18, 2026 **Status:** CLOSED — 0.7% closure (PAPER_132x-135x astrophysics + condensed matter)

Observation

PAPER_1350 (PAPER_132x-135x corpus) gives:

```
RVB threshold = Φ_5/6 × β_i = 0.502 (same primitive product as f_bar)
```

Status: **0.7%**.

UQFF Closed Identity

```
RVB threshold = Φ_5/6 × β_i = 0.502 (same primitive product as f_bar)    0.7%
```

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
