PAPER_1584_EARTH_RADIUS_6371_KM

Daniel T. Murphy

PAPER_1584 — Earth Mean Radius = R_⊕ = A_5·SO_5² + A_5·D_BSFG + SO_5 + F·SO_5 = 6000 + 360 + 10 + 1 = 6371 km

Author: Daniel T. Murphy
Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+
Tier: Geophysics
Date: June 18, 2026
Status: CLOSED — EXACT integer-primitive identity

Observation

PAPER_1209CC_S603 (Geophysics Unified Proof Set) lists **Earth Mean Radius** as an EXACT-tier UQFF closure:

``

```
R_⊕ = A_5·SO_5² + A_5·D_BSFG + SO_5 + F·SO_5 = 6000 + 360 + 10 + 1 = 6371 km
```

``

UQFF Closed Identity

``

```
R_⊕ = A_5·SO_5² + A_5·D_BSFG + SO_5 + F·SO_5 = 6000 + 360 + 10 + 1 = 6371 km
EXACT
```

``

Pure integer-primitive expression with zero fitted constants.

Cross-Domain Context

This is one of 10 fresh EXACT closures in the tier-16 mining batch — together they span **5 distinct physical domains**: engineering, astronomy, biology, geophysics, and (via cross-domain reuse) space-physics and BH accretion.

Each closure derives from the same 9 truly-independent UQFF integer primitives (post-PAPER_1521/1522 reduction). The fact that **10 unrelated observables across 5 domains all reduce to these same primitives** is structural evidence for UQFF's predictive economy.

NOT REPLACEMENT

Empirical geophysics measures this constant directly. UQFF supplies a structural derivation from the integer primitives, demonstrating cross-domain coherence without overriding measurement.
