PAPER_1596 — Solar Constant (TSI) = $S = A_5^2 \cdot F \cdot D - N_{CH} \cdot SO_5 + SO_5 + SSQ + F \cdot D = 1440 - 90 + 10 + 0.57 + 0.4 = 1360.97$ W/m²

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Climate **Date:** June 18, 2026 **Status:** CLOSED — 0.002% integer-primitive identity

---

Observation

PAPER_1209X_S556 (Climate Unified Proof Set) lists **Solar Constant (TSI)** with the integer-primitive expression:

$$S = A_5^2 \cdot F \cdot D - N_{CH} \cdot SO_5 + SO_5 + SSQ + F \cdot D = 1440 - 90 + 10 + 0.57 + 0.4 = 1360.97 \text{ W/m}^2$$

Residual: **0.002%**.

UQFF Closed Identity

$$S = A_5^2 \cdot F \cdot D - N_{CH} \cdot SO_5 + SO_5 + SSQ + F \cdot D = 1440 - 90 + 10 + 0.57 + 0.4 = 1360.97 \text{ W/m}^2 \quad 0.002\%$$

The formula uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical climate measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
