PAPER_1657 — Holographic Boundary Dimension = D_boundary = D_BSFG − 1 = 5

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Holography **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_134x broader corpus)

Observation

PAPER_1343 (PAPER_134x condensed matter / quantum sector) gives:

```
D_boundary = D_BSFG − 1 = 5
```

Status: **EXACT**.

UQFF Closed Identity

```
D_boundary = D_BSFG − 1 = 5     EXACT
```

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Experimental holography measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
