PAPER_1731 — GRB Long/Short Bimodality Boundary = T_90 boundary = D_phys/2 = 2 s (separates long and short GRB classes)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** High-Energy Astro **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_1240-1270 broader corpus)

Observation

PAPER_1258 (PAPER_1240-1270 broader corpus) gives:

```
T_90 boundary = D_phys/2 = 2 s (separates long and short GRB classes)
```

Status: **EXACT**.

UQFF Closed Identity

```
T_90 boundary = D_phys/2 = 2 s (separates long and short GRB classes)    EXACT
```

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
