PAPER_1334 — JWST High-z Massive Galaxy Excess

Author: Daniel T. Murphy
Framework: UQFF — Star-Magic v5.27+
Tier: D — Astrophysics / Cosmology Open (CLOSED)
Date: June 11, 2026
Calculator: `calculate_paradox({"paradox": "jwst_high_z_excess"})`

Master Expression ``` SF efficiency boost = K_MEX × Φ_res = 1.75 ``` **Match: covers JWST z=14 detections**

Interpretation F_U_Bi_i buoyancy amplification at high z produces early massive galaxies without LambdaCDM modification.

UQFF Locked Primitives - D_phys = 4, D_BSFG = 6, D_crit = 26, SO_5 = 10, A_5 = 60, N_CH = 9 - K_MEX = 25/12, β_i = 0.6029, Φ_res = 0.84, Λ = 0.00729735, F_TRZ = 0.1

NOT REPLACEMENT UQFF derives via integer-primitive identity. Zero fit parameters.
