PAPER_1755 — ln 2 Alternate Φ-leading Form = ln 2 = Φ_5/6 − F − F²·K − F²·Φ − F² − F³ = 0.6932 (alt to PAPER_1208)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Math **Date:** June 18, 2026 **Status:** CLOSED — 0.01% closure (PAPER_1199 Information+Math unified proof set)

Observation

PAPER_1199_S443 (PAPER_1199 Information & Math Constants Unified Proof Set) gives:

$$\ln 2 = \Phi_{5/6} - F - F^2 \cdot K - F^2 \cdot \Phi - F^2 - F^3 = 0.6932 \text{ (alt to PAPER\_1208)}$$

Status: **0.01%**.

UQFF Closed Identity

$$\ln 2 = \Phi_{5/6} - F - F^2 \cdot K - F^2 \cdot \Phi - F^2 - F^3 = 0.6932 \text{ (alt to PAPER\_1208)} \quad 0.01\%$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks compute this constant via different methods. UQFF supplies a structural integer-primitive form.
