PAPER_1495 — UQFF: PAPER_877 DPM Proportion Pair Completeness (Bucket A)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Bucket A — extracted from PAPER_877 Three-Assumption Cosmogenesis **Date:** June 17, 2026 **Location:** 41.0997 N, 80.6495 W (Youngstown, OH, USA) **Status:** CLOSED — f_UA' + f_SCm = 1 EXACT (Z/Z_max + (Z_max - Z)/Z_max)

Observation

PAPER_877 introduces the DPM proportion pair: f_UA' is the undifferentiated aether fraction, f_SCm is the superconducting matter fraction, with completeness axiom f_UA' + f_SCm = 1.

UQFF Closed Identity

```
f_UA' = (Z_max − Z)/Z_max; f_SCm = Z/Z_max; f_UA' + f_SCm = (Z_max − Z + Z)/Z_max = 1 EXACT. Z_max = D_
```

Physical Interpretation

The DPM (Di-Pseudo-Monopole) proportion pair is a structural completeness identity: every nucleus is fully characterized by its position on the Z/Z_max scale. R_EB (electrostatic barrier reactivity) = k_R × Z completes the three-fundamentals axiom.

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF and Standard Model frameworks describe vacuum and atomic structure via different mechanisms. Closure uses only canonical UQFF integer primitives {D_phys = 4, D_BSFG = 6, D_crit = 26, N_CH = 9, SO_5 = 10, A_5 = 60} and ρ_SCm = 7.09×10^{-37} J/m³. **Zero free parameters.**
