PAPER_1634 — Tritium (H-3) BE/A = H-3 BE/A = $-\beta^5 - F\cdot\beta - F\cdot\beta^2 + F^2\cdot\beta^3 + 3 = 2.826$ MeV

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Nuclear **Date:** June 18, 2026 **Status:** CLOSED — 0.039% closure

---

Observation

PAPER_1209II_S671 (Nuclear Unified Proof Set) gives:

`H-3 BE/A = −β⁵ − F·β − F·β² + F²·β³ + 3 = 2.826 MeV`

Residual: **0.039%**.

UQFF Closed Identity

```
H-3 BE/A = −β⁵ − F·β − F·β² + F²·β³ + 3 = 2.826 MeV    0.039%
```

The formula uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical nuclear measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
