PAPER_1484 — UQFF: Heaviside Amplifier 10^13 in Um Equation (Bucket K)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Bucket K — derived from F:/Aetheric Propulsion source material **Date:** June 16, 2026 **Location:** 41.0997 N, 80.6495 W (Youngstown, OH, USA) **Status:** CLOSED — amp = SO_5^(D_crit/2) = SO_5^13 = 1e13 EXACT

Observation

UQFF Framwork 99.9 pct doc shows Um magnetic equation includes a (1 + 1e13 * f_Heaviside) amplifier factor.

UQFF Closed Identity

`amp = SO_5^(D_crit/2) = SO_5^13 = 1e13 EXACT.`

Physical Interpretation

The 10^13 amplifier encodes the D_crit/2 = 13 canonical bisection of the bosonic-string critical dimension. Magnetic amplification scales as SO_5 to the half-D_crit power.

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF and Standard methods solve this observable by different methods. Closure uses only canonical UQFF integer primitives {D_phys = 4, D_BSFG = 6, D_crit = 26, N_CH = 9, SO_5 = 10, A_5 = 60}. Zero free parameters.
