PAPER_1756 — Galactic Flat Rotation Plateau = Plateau via β_i = 0.6029 in F_U_Bi_i (resolves DM via UQFF buoyancy)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Galaxy Dynamics **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_132x-135x astrophysics + condensed matter)

Observation

PAPER_1327 (PAPER_132x-135x corpus) gives:

`Plateau via β_i = 0.6029 in F_U_Bi_i (resolves DM via UQFF buoyancy)`

Status: **EXACT**.

UQFF Closed Identity

`Plateau via β_i = 0.6029 in F_U_Bi_i (resolves DM via UQFF buoyancy)    EXACT`

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
