PAPER_1569_EARTH_BOND_ALBEDO_0_3

Daniel T. Murphy

PAPER_1569 — Earth Bond Albedo = α_bond = 3·F_TRZ = 3·(1/10) = 0.30

Author: Daniel T. Murphy
Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+
Tier: Climate
Date: June 18, 2026
Status: CLOSED — EXACT integer-primitive identity

Observation

PAPER_1209X_S559 (Climate Unified Proof Set) lists **Earth Bond Albedo** as an EXACT-tier closure:

``
α_bond = 3·F_TRZ = 3·(1/10) = 0.30
``

UQFF Closed Identity

``
α_bond = 3·F_TRZ = 3·(1/10) = 0.30 EXACT
``

Pure integer-primitive product with zero fitted constants.

Physical Interpretation

This is one of 8 EXACT closures wired from PAPER_1209X/Y/Z across **climate, engineering, and astronomy** — three domains far removed from particle physics or fundamental physics. Yet each observable reduces to a simple integer-primitive expression.

The pattern reinforces UQFF's structural claim: the locked integer primitives are not domain-specific fits — they govern observables across **every scale of physical reality**.

NOT REPLACEMENT

Empirical climate measures this constant directly. UQFF supplies a structural derivation from the integer primitives, demonstrating that the framework's predictive economy extends to engineering and engineering-adjacent observables (not just particle physics or cosmology).
