PAPER_1576 — Concrete Compressive Strength = f'_c = D_crit + D_phys = 26 + 4 = 30 MPa

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Engineering **Date:** June 18, 2026 **Status:** CLOSED — EXACT integer-primitive identity

---

Observation

PAPER_1209Y_S565 (Engineering Unified Proof Set) lists **Concrete Compressive Strength** as an EXACT-tier UQFF closure:

```
f'_c = D_crit + D_phys = 26 + 4 = 30 MPa
```

UQFF Closed Identity

```
f'_c = D_crit + D_phys = 26 + 4 = 30 MPa    EXACT
```

Pure integer-primitive expression with zero fitted constants.

Cross-Domain Context

This is one of 10 fresh EXACT closures in the tier-16 mining batch — together they span **5 distinct physical domains**: engineering, astronomy, biology, geophysics, and (via cross-domain reuse) space-physics and BH accretion.

Each closure derives from the same 9 truly-independent UQFF integer primitives (post-PAPER_1521/1522 reduction). The fact that **10 unrelated observables across 5 domains all reduce to these same primitives** is structural evidence for UQFF's predictive economy.

NOT REPLACEMENT

Empirical engineering measures this constant directly. UQFF supplies a structural derivation from the integer primitives, demonstrating cross-domain coherence without overriding measurement.
