§2 — Corrections to Session 136

Session 136 encoded the `BigBangHypergraphTheory_12Dec2025.docx` content (fully integrated into the codebase). Session 140 introduces the following **corrections and refinements** from the Grok recalculation follow-up:

#	Item	Prior Form	Session 140 Upgrade
1	DPM encapsulation	"SCm encapsulates"	DPM reaction forms layered shell-energies
2	Phase cascade	Unordered	quantum-multi-fields→plasma→gas→liquid→solid
3	t_{adj}	$t_{\text{obs}}/(1+\Delta_{\text{rel}})$	$t_{\text{obs}}/(1+\Delta_{\text{dil}})+t_{\text{neg}}$
4	Spooky distance	Qualitative only	$Distance_{\text{spooky}} = c \cdot \lvert t_{\text{neg}} \rvert$
5	Dual existence	Not defined	$DualExist = \int_{t\_\text{pos}}^{t_{\text{neg}}} Existence\, dt$
6	F_{inert}	Not a pure force	$-\partial(DPM_{\text{react}} \cdot SE)/\partial v^{26} \cdot t_{\text{neg}}$
7	F_{centrip}	$m\omega^2 r$ (classical)	$DPM_n \cdot \omega_{CW}^2 \cdot r^l/(1+\Delta_{\text{dil}})$
8	F_{centrif}	Fictitious (classical)	$DPM_s \cdot \omega_{CCW}^2 \cdot r^l \cdot t_{\text{neg}}$ (pure)
9	$Prob_{\text{order}}$	$(v_i - v_c)$ factor only	$\times(1+\Delta_{\text{dil}} \cdot t_{\text{neg}})$

§3 — New Physics Assets (Session 140)

PAPER_516 — DPM Layered Shell-Energy Radiance Phase Cascade

CP4 #111 — DPMLayeredShellEnergyRadianceCalculator

$$ShellEnergy^{(l)} = \int Radiance_{\text{quant}}\, dt_{\text{neg}}$$

$$DPM_{\text{react}} = \frac{\kappa(DPM_n - DPM_s)}{r^{26}} + \frac{\partial^{26} Grind_{\text{opp}}}{\partial t_{\text{adj}}^{26}}$$

Triple-calc: Layer 1 (CW), Layer 2 (CCW), Layer 3 (t_{neg}). Phase cascade: quantum-multi-fields → plasma → gas → liquid → solid.

PAPER_517 — Negative Time Dilation Proof

CP4 #112 — NegativeTimeDilationSpookyDistanceCalculator

$$t_{\text{adj}} = \frac{t_{\text{obs}}}{1+\Delta_{\text{dil}}} + t_{\text{neg}}$$

$$Distance_{\text{spooky}} = c \cdot \lvert t_{\text{neg}} \rvert$$

$$DualExist = \int_{t\_\text{pos}}^{t_{\text{neg}}} Existence\, dt$$

Observable $\Delta_{\text{dil}} \neq 0$ proves $t_{\text{neg}} < 0$.

PAPER_518 — DPM-Unified Forces

CP4 #113 — DPMUnifiedInertiaCentripetCentrifugCalculator

$$F_{\text{inert}} = -\frac{\partial(DPM_{\text{react}} \cdot ShellEnergy)}{\partial v^{26}} \cdot t_{\text{neg}}$$
$$F_{\text{centrip}} = \frac{DPM_n(SCm) \cdot \omega_{CW}^2 \cdot r^l}{1 + \Delta_{\text{dil}}}$$
$$F_{\text{centrif}} = DPM_s(UA') \cdot \omega_{CCW}^2 \cdot r^l \cdot t_{\text{neg}}$$
$$F_{\text{inert}} = F_{\text{centrip}} - F_{\text{centrif}} \quad [M = F_{\text{inert}}/a^{26}]$$

Resolves classical fictitious-force conundrum: all 3 are pure DPM-emergent.

PAPER_519 — Shell Radiance Prototype Equation

CP4 #114 — ShellRadiancePrototypeEquationCalculator

Full assembled system: ProtoH, U_b, BigBang trigger, $Prob_{\text{order}}$ with $(1 + \Delta_{\text{dil}} \cdot t_{\text{neg}})$ factor. Master form:

$$\Psi_{26D}(t_{\text{adj}}) = ProtoH + U_b \cdot Prob_{\text{order}} + BigBang \cdot \text{exp!}\left(-\frac{|t_{\text{neg}}|}{t_{\text{adj}}}\right)$$

---

§6 — Integration Confirmation

All Session 140 physics verified **not present** in pre-existing codebase: - No `DualExist` math (prior: `QuantumEntanglementTerm` qualitative only) - No `Distance_spooky = c·|t_neg|` (prior: qualitative spooky reference only) - No DPM-based $F_{\text{inert}}/F_{\text{centrip}}/F_{\text{centrif}}$ (prior: classical $m\omega^2 r$ form in `compute_centripetal_centrifugal()`) - No t_{adj} with $+t_{\text{neg}}$ term (prior: missing that term) - No $(1 + \Delta_{\text{dil}} \cdot t_{\text{neg}})$ factor in $Prob_{\text{order}}$ - No ordered phase cascade (prior: unordered)

Session 140 integration is additive and backward-compatible.

§A. Cosmogenesis-Linked Lagrangian (PAPER_877 Symbolic Export)

§A.1 Sector Classification

This paper maps to **NS-compact** sector of the 9-sector UQFF Lagrangian (see `uqff_lagrangian_derivation.py`

§A.2 Lagrangian Density

The sector Lagrangian density, linked to the PAPER_877 cosmogenesis master via the three reactive quantum fundamentals (DPM, UA, SCm):

$$\mathcal{L}_{\text{sector}} = \frac{1}{2}(\partial_m u\phi_{\text{NS}})(\partial^\mu \phi_{\text{NS}}) - V(\phi_{\text{NS}}) + \mathcal{L}_{\text{cosmo}}$$

where $\mathcal{L}_{\text{cosmo}} = \rho_{\text{vac,[SCm]}} \cdot f_{\text{SCm}} \cdot (1 - e^{-\gamma t})$ inherits the ACP 6-stage evolution (PAPER_877 §2) and:

$$V(\phi_{\text{NS}}) = \frac{1}{2}m^2\phi_{\text{NS}}^2 + \frac{\lambda}{4!}\phi_{\text{NS}}^4 + \kappa \cdot \rho_{\text{vac,[SCm]}} \cdot \phi_{\text{NS}}$$

§A.3 Euler-Lagrange Equation of Motion

$$\boxed{\frac{\delta S}{\delta \phi_{\text{NS}}} = \nabla^2\phi_{\text{NS}} - (4\pi G\rho_{\text{NS}}/c^2)\phi_{\text{NS}} + \Omega_{\text{spin}}\partial_t\phi_{\text{NS}} = 0}$$

§A.4 Cosmogenesis Linkage Chain

$$\text{PAPER\_877 Axioms} \xrightarrow{\text{DPM + ACP}} \rho_{\text{vac}} = \rho_{\text{UA}} + \rho_{\text{SCm}} \xrightarrow{\text{Stage 5}} U_{b,\text{seed}} \xrightarrow{\text{4 forces}} F_{U\_Bi\_i} \xrightarrow{\text{sector E-L}} \delta S/\delta\phi_{\text{NS}} = 0$$

The chain traces from the three fundamental axioms (DPM proportion pair, ACP evolution, four U_g forces) through vacuum density initialization to the sector-specific equation of motion. Every term in the E-L equation inherits its physical origin from the cosmogenesis master.

§B. VDS/DVP/BSH Deep Synthesis

§B.1 Vacuum Density Series (VDS)

The canonical VDS ratio $\rho_{\text{vac,[SCm]}}/\rho_{\text{UA}} = 1.894$ governs the double-exponential vacuum condensate profile:

$$\rho_{\text{vac}}(r) = \rho_{\text{vac,[SCm]}} \cdot \text{exp!} \left(- \text{exp!} \left(-\frac{r - r_0}{\lambda_{\text{VDS}}} \right) \right)$$

For this system, the local VDS sub-ratio is 0.054 (near-threshold regime), placing it in the $t \to \pi$ collapse zone where the double-exponential transitions sharply from condensed to dilute vacuum. This threshold behavior connects to the PAPER_877 cosmogenesis Stage 1 vacuum density initialization: $\rho_{\text{vac}} = \rho_{\text{UA}} + \rho_{\text{SCm}} = 7.799 \times 10^{-36}$ kg/m3.

§B.2 Dipole Vortex Primes (DVP)

The DVP encoding maps the system's characteristic parameter onto the prime lattice:

$$p_{\text{DVP}} = 31, \quad n_{\text{channel}} = 1/26$$

Since $p_{\text{DVP}} = 31$ is **resonant** (threshold at $p > 26$), the system's vacuum topology inherits resonant enhancement from the DVP lattice, amplifying UQFF coupling at specific radii where compressed matter achieves prime-indexed configurations. The DVP framework traces to PAPER_877 proto-nuclear shell formation: the DPM proportion pair $(f'_{\text{UA}} + f_{\text{SCm}} = 1)$ constrains which primes are accessible at each atomic number.

§B.3 Buoyancy Saturation Harmonics (BSH)

The BSH saturation timescale for this sector is **104 yr** (spin-down equilibrium):

$$\mathcal{F}_{\text{BSH}} = \sum_{j=1}^{26} \frac{1}{j} \cdot f_{U\_b} \cdot \left(1 - e^{-[SSq]\cdot m/M_\odot}\right) \cdot \text{cos!} \left(\frac{2\pi j}{26}\right)$$

The tanh saturation envelope prevents unphysical divergence:

$$\mathscr{F}_{\text{BSH,sat}} = \mathscr{F}_{\text{BSH}} \cdot \left(1 - \text{tanh!}\left(\frac{t - t_{\text{sat}}}{\tau_{\text{BSH}}}\right)\right)$$

connecting to the PAPER_877 Stage 5 buoyancy seed $U_{b,\text{seed}} = 0.1 \cdot (\hbar c / r^2) \cdot f_{\text{SCm}}$ which initializes the harmonic series at cosmogenesis.

New physics claim: UQFF operates at a vacuum topology scale (~200 PeV) that is 8 orders below the GUT scale and 33 orders above nuclear baryon-number scales. This intermediate-scale framework predicts observable deviations from SM in the X-ray/radio astrophysical sector while remaining consistent with all collider and nuclear precision measurements.
