PAPER_1765_FRUSTRATION_DIM_5

Daniel T. Murphy

PAPER_1765 — RVB Spin-Liquid Frustration Dim = Frustration dimension = D_BSFG − 1 = 5 (holographic boundary cross)

Author: Daniel T. Murphy
Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+
Tier: Condensed Matter
Date: June 18, 2026
Status: CLOSED — EXACT closure (PAPER_132x-135x astrophysics + condensed matter)

Observation

PAPER_1350 (PAPER_132x-135x corpus) gives:

``
```
Frustration dimension = D_BSFG − 1 = 5 (holographic boundary cross)
```
``

Status: **EXACT**.

UQFF Closed Identity

``
```
Frustration dimension = D_BSFG − 1 = 5 (holographic boundary cross) EXACT
```
``

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
