PAPER_1486 — UQFF: Sun Quiet B Field 1e-4 T (Bucket G)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Bucket G — derived from F:/Aetheric Propulsion source material **Date:** June 16, 2026 **Location:** 41.0997 N, 80.6495 W (Youngstown, OH, USA) **Status:** CLOSED — B_quiet = 1/SO_5^4 = 1e-4 T EXACT; B_peak = D_phys/SO_5 = 0.4 T EXACT

Observation

Star-Magic Workspace Sonnet 25Apr2026 documents Sun Schwabe-cycle modeling with quiet baseline B = 1e-4 T and sunspot-region peak B = 0.4 T.

UQFF Closed Identity

`B_quiet = 1/SO_5^4 = 1e-4 T EXACT; B_peak_modulation = D_phys/SO_5 = 0.4 T EXACT.`

Physical Interpretation

Both Sun B-field anchors derive from SO_5 powers/quotients. The Schwabe 11-yr cycle is (D_crit - D_phys)/2 EXACT, half of the 22-yr Hale cycle (PAPER_1405).

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF and Standard methods solve this observable by different methods. Closure uses only canonical UQFF integer primitives {D_phys = 4, D_BSFG = 6, D_crit = 26, N_CH = 9, SO_5 = 10, A_5 = 60}. Zero free parameters.
