Observation

PAPER_1209X_S554 (Climate Unified Proof Set) gives the formula:

```
Γ = D_BSFG + SSQ − F·Φ_5/6 ≈ 6.4867 K/km
```

Residual: **0.21%**.

UQFF Closed Identity

```
Γ = D_BSFG + SSQ − F·Φ_5/6 ≈ 6.4867 K/km    0.21%
```

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical climate measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
