PAPER_887: UQFF Vs String Theory 10-Aspect Comparison

Author: Daniel T. Murphy – Star Magic / UQFF Framework **Date:** 2026-04-08 **Session:** 209 **Source:** Sessions 204-208 standalone module integration **Calculator:** UQFFVsStringTheory10AspectComparisonCalc (CP4 #471) **CVW:** v2.0.0 compliant

---

Abstract

Systematic 10-aspect phenomenological comparison between UQFF and String Theory. Weighted scoring across foundation, extra-dimensions, vacuum structure, predictions, testability, GW, dark energy, unification, mathematical rigor, and Occam simplicity. UQFF uses 26D Ramanujan with single vacuum (2 calibrated parameters); String uses 10/11D Calabi-Yau with 10^500 landscape (~100 moduli).

---

1. Core Equations

```
Weighted scoring across 10 aspects, 4 categories (testability 25%, prediction 20%, unificat
```

---

2. Parameters

Parameter	Default	Description
(none)	—	Deterministic comparison, no free parameters

---

3. UQFF Integration

This calculator integrates uqff_vs_string_comparison.py from Session 205 into the CP4 pipeline as class #471.
