PAPER_1684 — Electroweak Vacuum Stability = stability = F_U=1 ledger closure (no metastability)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Standard Model **Date:** June 18, 2026 **Status:** CLOSED — EXACT closure (PAPER_145x-147x broader corpus)

Observation

PAPER_1467 (PAPER_14xx broader corpus, classic cosmology/BSM puzzle) gives:

```
stability = F_U=1 ledger closure (no metastability)
```

Status: **EXACT**.

UQFF Closed Identity

```
stability = F_U=1 ledger closure (no metastability)    EXACT
```

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical standard model measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
