PAPER_1766_GW_MEMORY_FRACTION_6_PCT

Daniel T. Murphy

PAPER_1766 — GW Memory Fraction = h_mem/h_peak = F_TRZ × β_i = 0.0603 (GW memory effect)

Author: Daniel T. Murphy
Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+
Tier: GW Events
Date: June 18, 2026
Status: CLOSED — EXACT closure (PAPER_142x-144x + scattered)

Observation

PAPER_1429 catalog gives:

``
`h_mem/h_peak = F_TRZ × β_i = 0.0603 (GW memory effect)`
``

Status: **EXACT**.

UQFF Closed Identity

``
`h_mem/h_peak = F_TRZ × β_i = 0.0603 (GW memory effect) EXACT`
``

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
