Observation

PAPER_1435 catalog gives:

```
E_S^enh = 1.32e18 × Φ × (1+F_TRZ) = 1.22×10¹■ V/m
```

Status: **0.026%**.

UQFF Closed Identity

```
E_S^enh = 1.32e18 × Φ × (1+F_TRZ) = 1.22×10¹■ V/m 0.026%
```

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Standard frameworks address this differently. UQFF supplies a structural integer-primitive form.
