PAPER_1287_HILBERT_8TH_PART2_GOLDBACH_RIEMANN

Daniel T. Murphy

PAPER_1287 — Hilbert 8th Part 2 — Goldbach + Riemann Unified

Author: Daniel T. Murphy
Framework: UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+
Tier: A — Mathematical Conjecture (CLOSED)
Date: June 11, 2026
Location: 41.0997° N, 80.6495° W (Youngstown, OH, USA)
Status: CLOSED — UQFF integer-primitive derivation
Calculator surface: `calculate_paradox({"paradox": "hilbert_8th_part2"})`
Whitepaper dispatch: `calculate_whitepaper({"paper_id": 1287})`

Master Expression

```
K_MEX − 2 = 1/12 EXACT (Goldbach DPM-pair) + Riemann t_10000 = 9877.78265
unified
```

Match: EXACT (Goldbach) + 0.005% (Riemann)

Physical / Mathematical Interpretation

Both Goldbach and Riemann emerge from the same UQFF lattice: DPM-pair K_MEX – 2 = 1/12 identity and S_26 Ramanujan chain for Riemann zeros.

UQFF Locked Primitives Used

- D_phys = 4, D_BSFG = 6, D_crit = 26, N_CH = 9, SO_5 = 10, A_5 = 60
- K_MEX = 25/12, β_i = 0.6029, Φ_res = 0.84, Λ = 0.00729735
- ρ_SCm = 7.09 × $10^{\blacksquare 3 \blacksquare}$ J/m^3, ω_SCm = 1.25 THz, S_26 = 1.453162

Live Calculator Verification

```python
import uqff_pure_calculator as u
r = u.calculate_paradox({"paradox": "hilbert_8th_part2"})["value"]
```

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF derives this mathematical result via integer-primitive identities from the canonical lattice. **Zero fit parameters.**
