PAPER_616: UQFF Um DPM Time-Derivative 26th-Order

Abstract

The magnetic-DPM field component U_m is extended to include a 26th-order time-derivative of a polynomial expansion $\sum_{k=0}^{26} c_k t^k$. The only surviving term under the 26th derivative is the degree-26 coefficient: $d^{26}/dt^{26}(\sum c_k t^k) = 26! \cdot c_{26}$. This introduces temporal quantization of DPM field amplitudes, ensuring unique field values per UQFF sphere across all 26 temporal modes.

§1. Introduction

The original $U_m = \kappa(DPM_n - DPM_s)/r^{26}$ encodes the spatial 26D inverse distance law for the DPM dipole field. The BigBangHypergraphTheory document extends U_m to include temporal quantization through the full 26th-order derivative of a time polynomial.

§2. Extended U_m Formulation

$$\boxed{U_m} = \kappa \cdot \frac{DPM_n - DPM_s}{r^{26}} + \frac{d^{26}}{dt^{26}} \left(\sum_{k=0}^{26} c_k t^k \right)$$

2.1 Spatial Component

$$U_m^{(\text{spatial})} = \kappa \cdot \frac{DPM_n - DPM_s}{r^{26}}$$

The $1/r^{26}$ denominator reflects the full 26D inverse-distance law (one dimension per factor), matching the BH26 harmonic structure.

2.2 Temporal Component — 26th Derivative

For any polynomial $\sum_{k=0}^{26} c_k t^k$:

$$\frac{d^{26}}{dt^{26}} \left(\sum_{k=0}^{26} c_k t^k \right) = 26! \cdot c_{26}$$

All terms with $k < 26$ vanish (differentiated to zero). Only c_{26} survives:

$$U_m^{(\text{temporal})} = 26! \cdot c_{26} = 4.03 \times 10^{26} \cdot c_{26}$$

2.3 Total

$$U_m = \kappa \cdot \frac{DPM_n - DPM_s}{r^{26}} + 26! \cdot c_{26}$$

§3. Temporal Quantization Interpretation

Each UQFF sphere is assigned a unique c_{26} coefficient indexed by its DVP prime series. Since $26!$ is prime-free (has no prime factors > 23), the product $26! \cdot c_{26}$ spans a distinct quantized amplitude per sphere. No two spheres share the same c_{26} .

§4. VDS / DVP / BH26 Connections

- **VDS:** c_k coefficients encode vacuum density temporal modes at epoch k .
- **DVP:** c_{26} is the DVP prime-indexed DPM temporal amplitude, unique per sphere.
- **BH26:** Spatial term $1/r^{26} = \text{BH26 full inverse-distance law across all 26 dimensions.}$

§5. Conclusions

The extended U_m with 26th-order temporal derivative quantizes the DPM field in the time dimension at the factorial scale $26!$. This ensures temporal uniqueness of magnetic couplings across all UQFF spheres and eliminates resonance degeneracy in the time domain.
