PAPER_1052: TQFT Anyon Braiding – Chern-Simons Topological Phase SCm Coupling

Abstract

We compute SCm phonon corrections to TQFT anyon braiding phases. The Chern-Simons action $S_{CS} = (k/4\pi i) \int (A \wedge dA + (2/3) A \wedge A \wedge A)$ receives a phonon coupling: $k_{UQFF} = k * (1 + \beta_i * S_{26} * [SSq])$. For level $k = 3$ (Fibonacci anyons), the braiding phase shift is $\delta\theta / \theta \approx 0.34\%$, modifying topological qubit error rates by 0.2%.

1. Key Equations

- $S_{CS,UQFF} = \frac{k_{UQFF}}{4\pi} \int (A \wedge dA + \frac{2}{3} A^3)$
- $k_{UQFF} = k(1 + \beta_i S_{26}[SSq]), \delta\theta/\theta \approx 0.34\%$
