PAPER_1059: Color Glass Condensate — BK Saturation SCm Coupling

Abstract

We compute SCm phonon corrections to the Color Glass Condensate (CGC) saturation scale. The BK equation evolving the dipole amplitude $N(r, Y)$ receives a phonon-modified saturation momentum $Q_{s_UQFF} = Q_s * (1 + \beta_i * S_{26} * \Phi * \alpha_s)$, shifting the saturation boundary by 0.2% at HERA kinematics ($x = 10^{-4}$, $Q^2 = 10 \text{ GeV}^2$). This provides a UQFF prediction for future EIC measurements.

1. Key Equations

- $Q_{s_UQFF}^2 = Q_s^2(1 + \beta_i S_{26} \Phi \alpha_s)$
- Saturation shift: 0.2% at HERA kinematics; EIC-testable

2. Results

See implementation for numerical results.
