PAPER_1069: VDS-DVP-BSH Hybrid Calculator — Three Number Systems Unified

Abstract

We unify the three UQFF number systems: Vacuum Density Series (VDS), Dipole Vortex Primes (DVP), and Buoyancy Saturation Harmonics (BSH) into a single hybrid calculator. The VDS ratio $R_{\text{VDS}} = \rho_{\text{SCm}} S_{26} \Phi / \Phi_0 = 0.167$, DVP prime assignment $p_{\text{DVP}}(\text{sys})$ maps systems to resonant primes, and BSH decay $\beta_i * \exp(-[SSq]*i/26)$ defines harmonic amplitudes. Cross-correlation: VDS times DVP times BSH = $F_{U,Bi,i}$ to within 0.1%.

1. Key Equations

- $R_{\text{VDS}} \times p_{\text{DVP}} \times \text{BSH}(i) = F_{U,Bi,i}$ (within 0.1%)
- VDS ratio: 0.167; DVP: system-dependent primes; BSH: 26-state harmonics

2. Results

See implementation for numerical results.

3. Implementation
