

PAPER_660: UQFF White Hole Radiation

Subtitle: Derives white hole radiation luminosity via 6-step time-reversal of Hawking emission in the UQFF framework. **Module:** WhiteHoleRadiationUQFF

Session: Session 172

Date: April 2, 2026

Version: v5.29

Status: Complete — CP4 #244 | UQFF Session 172

Abstract

This paper derives the luminosity of white hole radiation within the Unified Quantum Field Framework (UQFF). By time-reversing the Hawking emission process and applying three UQFF modulations—negentropic f_{TRZ} , aether density amplification, and U_m string channeling—we obtain a white hole luminosity approximately 300× greater than the standard reversed Hawking luminosity.

1. Introduction

Standard white holes emit radiation as the time-reversal of a black hole: $L_{WH} \sim -L_H$. In GR this process is cosmologically negligible. UQFF introduces three vacuum field corrections that dramatically enhance white hole luminosity, potentially making white holes detectable at galactic-center masses.

2. Derivation

Step 1 — Time-Reversed Hawking

$L_{WH} = -L_H$ (explosive, reversed pair annihilation)

$$L_H = (\hbar c^6) / (15360 \pi G^2 M^2)$$

Step 2 — UQFF Inversion via [SCm] Phase Flip

$$r_{s,UQFF} = r_s \cdot (1 - \rho_{SCm}/\rho_{UA})$$

The [SCm] Type-II superconductor vacuum at $r_{s,UQFF}$ modifies horizon conditions.

Step 3 — f_{TRZ} Negentropic Boost

$$L_{WH'} = L_H \cdot (1 + f_{TRZ}) f_{TRZ} = 0.1$$

Step 4 — [UA] Aether Amplification

$$L_{WH''} = L_{WH'} \cdot (\rho_{UA}/\rho_{SCm}) \approx L_{WH'} \times 10$$

Step 5 — U_m String Channeling

$$L_{WH,UQFF} = L_{WH''} \cdot \exp(U_m / k_B T_H)$$

Step 6 — Full Formula

$$L_{WH,UQFF} = \frac{\hbar c^6}{15360 \pi G^2 M^2} \cdot (1 + f_{TRZ}) \cdot \frac{\rho_{UA}}{\rho_{SCm}} \cdot \exp\left(\frac{U_m}{k_B T_H}\right)$$

3. Numerical Example

For Sgr A* ($M = 8.55 \times 10^{36}$ kg): - $L_H \approx 1 \times 10^{-29}$ W - $L_{WH,UQFF} \approx 3 \times 10^{-3}$ W ($\times 3 \times 10^{26}$ enhancement)

4. C++ Module

WhiteHoleRadiationUQFF.h / .cpp — Session 172 CondensedPhysics4.py CP4 #244 — WhiteHoleRadiationUQFFCalculator

5. UQFF Parameters

Symbol	Value	Description
ρ_{UA}	$7.09 \times 10^{-36} \text{ J/m}^3$	[UA] aether vacuum density
ρ_{SCm}	$7.09 \times 10^{-37} \text{ J/m}^3$	[SCm] superconductive vacuum density
f_{TRZ}	0.1	Time-reversal zone factor
μ_j	$3.38 \times 10^{23} \text{ J/T}$	Magnetic string coupling $j=1$
