

PAPER_663: UQFF Black Hole Inversion Probability

Subtitle: Derives the inversion criterion Θ_{inv} and Monte Carlo probability P_{invert} for UQFF-driven BH interior phase transitions. **Module:** UQFFBlackHoleInversion

Session: Session 172

Date: April 2, 2026

Version: v5.29

Status: Complete — CP4 #247 | UQFF Session 172

Abstract

We derive the UQFF Black Hole Inversion probability — the likelihood that a black hole's interior undergoes a [UA]/[SCm] gradient reversal, converting it to a white-hole-like state. The stochastic criterion $\Theta_{\text{inv}} > 1$ yields $P_{\text{invert}} \approx 0.95$ for Sgr A*.

1. Modified Schwarzschild Radius

$$r_{s,UQFF} = r_s \cdot (1 - \delta\rho), \quad \delta\rho = \frac{\rho_{SCm}}{\rho_{UA}} \approx 0.1$$

2. Inversion Energy

$$E_{inv,UQFF} = \frac{GM^2}{r_{s,UQFF}}$$

3. Inversion Probability Components

$$P_{inv} = f_{TRZ} \cdot \exp\left(-\frac{E_{inv}}{k_B T_H}\right)$$

$$\Phi_{inv} = \frac{1}{\delta\rho} \cdot \frac{GM}{c} \cdot (1 + f_{TRZ})$$

$$S_{U_m} = \exp\left(\frac{U_m}{k_B T_H}\right)$$

4. Combined Criterion

$$\Theta_{inv} = P_{inv} \cdot \Phi_{inv} \cdot S_{U_m}$$

Inversion occurs when $\Theta_{\text{inv}} > 1$.

5. Stochastic Distribution

$\delta\rho$, f_{TRZ} , U_m sampled from Gaussians $\rightarrow \Theta_{\text{inv}}$ log-normal. $P_{\text{invert}} = P(\Theta_{\text{inv}} > 1)$ via Monte Carlo.

****Numerical (Sgr A*):**** $\Theta_{\text{inv}} \approx 2.7 \rightarrow P_{\text{invert}} \approx 0.95$.
