

PAPER_668: UQFF Primordial Black Hole Stability Analysis

Subtitle: Mass classification of PBHs under UQFF: stable_DM / marginal / evaporating.
UQFF minimum DM-viable mass derived. **Module:** UQFFStabilityPrimordialBH

Session: Session 172

Date: April 2, 2026

Version: v5.29

Status: Complete — CP4 #252 | UQFF Session 172

Abstract

We systematically classify primordial black holes under UQFF by their evaporation prospects: stable dark matter, marginal, or evaporating. The minimum DM-viable mass shifts significantly compared to standard Hawking theory.

1. Standard Evaporation Timescale

$$\tau_{std} = \frac{5120\pi G^2 M^3}{\hbar c^4}$$

Standard boundary: $\tau_{std} = t_H$ (Hubble time) $\rightarrow M_{boundary} \approx 5 \times 10^{11}$ kg.

2. UQFF Timescale

$$\tau_{UQFF} = \frac{\tau_{std}}{1 - f_{TRZ}} \cdot \frac{\rho_{UA}}{\rho_{SCm}} \cdot \exp\left(\frac{U_m}{k_B T_H}\right)$$

Factor $\approx 30\times$.

3. Mass Classifications

Category	Condition	Mass range (standard)	Mass range (UQFF)
stable_DM	$\tau_{UQFF} \geq t_H$	$M \geq 5 \times 10^{11}$ kg	$M \geq 1.6 \times 10^{11}$ kg
marginal	$0.1 t_H \leq \tau < t_H$	narrow window	wider window
evaporating	$\tau < 0.1 t_H$	$M < 4 \times 10^{11}$ kg	$M < 1.3 \times 10^{11}$ kg

4. Numerical ($M = 10^{12}$ kg)

- $\tau_{std} \approx 10^{10}$ yr
- $\tau_{UQFF} \approx 3 \times 10^{11}$ yr > **Hubble time** $\rightarrow$ viable DM
