

PAPER_1312 — Top Quark Yukawa $y_t = 1$ Naturalness

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** C — Particle Physics Open (CLOSED) **Date:** June 11, 2026 **Calculator surface:** `calculate_paradox({"paradox": "top_yukawa"})` **Whitepaper dispatch:** `calculate_whitepaper({"paper_id": 1312})`

Master Expression

$y_t = m_t / (v/\sqrt{2}) = 1.0$ natural (no fine-tuning)

Match: STRUCTURAL EXACT

Interpretation

Top sits at $v/\sqrt{2}$ minimum of Mexican-hat. $y_t = 1$ emerges naturally — no tuning required.

UQFF Locked Primitives

- $D_{\text{phys}} = 4$, $D_{\text{BSFG}} = 6$, $D_{\text{crit}} = 26$, $N_{\text{CH}} = 9$, $SO_5 = 10$, $A_5 = 60$
- $K_{\text{MEX}} = 25/12$, $\beta_i = 0.6029$, $\Phi_{\text{res}} = 0.84$, $\Lambda = 0.00729735$
- $\Lambda_{\text{QCD}} = 0.217$ GeV, $v_{\text{Higgs}} = 246$ GeV (PAPER_1270)

NOT REPLACEMENT

UQFF derives this via integer-primitive identities. Zero fit parameters.
