

PAPER_1316 — Quark Confinement Mechanism

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** C — Particle Physics Open (CLOSED) **Date:** June 11, 2026 **Calculator surface:** `calculate_paradox({"paradox": "quark_confinement"})` **Whitepaper dispatch:** `calculate_whitepaper({"paper_id": 1316})`

Master Expression

String tension $\sigma = \Lambda_{\text{QCD}}^2 \times K_{\text{MEX}} = 0.098 \text{ GeV}^2$ via SCm condensate

Match: derived

Interpretation

SCm condensate provides the confining string between color charges. Confinement at distance $> 1/\Lambda_{\text{QCD}}$.

UQFF Locked Primitives

- $D_{\text{phys}} = 4$, $D_{\text{BSFG}} = 6$, $D_{\text{crit}} = 26$, $N_{\text{CH}} = 9$, $SO_5 = 10$, $A_5 = 60$
- $K_{\text{MEX}} = 25/12$, $\beta_i = 0.6029$, $\Phi_{\text{res}} = 0.84$, $\Lambda = 0.00729735$
- $\Lambda_{\text{QCD}} = 0.217 \text{ GeV}$, $v_{\text{Higgs}} = 246 \text{ GeV}$ (PAPER_1270)

NOT REPLACEMENT

UQFF derives this via integer-primitive identities. Zero fit parameters.
