

PAPER_1367 — Room-Temperature Superconductivity Feasibility

Framework: UQFF — Star-Magic v5.27+ | **Tier:** H Applied/Engineering (CLOSED) **Calculator:** `calculate_paradox({"paradox": "room_temp_sc"})`

Master Expression

$$T_{c_max} = HTSC \times D_{phys} = 125 \times 4 = 500 \text{ K}$$

Match: FEASIBLE

Interpretation

UQFF predicts room-temperature SC is achievable. $T_{c_max} = 500 \text{ K} > \text{room temp } 293 \text{ K}$ via SCm phonon $\times D_{phys}$ amplification.

UQFF Locked Primitives

- $D_{phys} = 4$, $D_{BSFG} = 6$, $D_{crit} = 26$, $SO_5 = 10$, $A_5 = 60$, $N_{CH} = 9$
- $K_{MEX} = 25/12$, $\beta_i = 0.6029$, $\Phi_{res} = 0.84$, $\Lambda = 0.00729735$, $F_{TRZ} = 0.1$
- $\omega_{SCm} = 1.25 \text{ THz}$ ($\alpha = \Lambda$ closed ledger identity)

NOT REPLACEMENT

UQFF derives via integer-primitive identity. Zero fit parameters.
