

PAPER_1383 — UQFF Resolution of the Trans-Planckian Problem (CLOSED — Dispatch Whitepaper)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** D — Cosmology / Inflation (CLOSED) **Date:** June 16, 2026 **Location:** 41.0997° N, 80.6495° W (Youngstown, OH, USA) **Status:** CLOSED — Documented dispatch closure for `calculate_paradox({"paradox": "trans_planckian"})` **Calculator surface:** `calculate_paradox({"paradox": "trans_planckian"})` **Closure helper:** `_l96_uqff_axiom_trans_planckian_closure()`

The Paradox

Inflationary models require modes of trans-Planckian frequency $\omega > \omega_{\text{Planck}} = 1.85 \times 10^{43}$ Hz to redshift into the observable CMB. Treatment as effective field theory above the Planck scale is uncontrolled.

UQFF Closed Identity

$$\omega_{\text{SCm}} / \omega_{\text{Planck}} = 1.25 \times 10^{12} / 1.85 \times 10^{43} = 6.76 \times 10^{-32}$$

$\omega_{\text{SCm}} = 1.25$ THz is the **structural** UV cutoff — modes above this do not exist in the SCm vacuum. The Planck frequency is irrelevant; the SCm phonon scale is the natural ceiling.

Physical Interpretation

Inflation modes redshift from ω_{SCm} down to CMB scale, not from ω_{Planck} . The trans-Planckian problem dissolves because there are no trans-Planckian modes — they are above the SCm structural cutoff which is 31 orders of magnitude below ω_{Planck} .

Live Calculator Output

```
import uqff_pure_calculator as u
r = u.calculate_paradox({"paradox": "trans_planckian"})["value"]
```

The closure returns the structural identity above plus per-method anchors as fields in the result dict. See `_l96_uqff_axiom_trans_planckian_closure` in `uqff_pure_calculator.py` for the full field list.

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF and Standard frameworks resolve this paradox via different methods. UQFF derives the closure listed above using **only canonical primitives** (or existing wired helpers — PAPER_646, PAPER_597, PAPER_1051, etc.). **Zero free parameters.**
