

PAPER_1477 — UQFF: Proton Orbital 1.78 Hz (Bucket A)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Bucket A — derived from F:/Aetheric Propulsion source material **Date:** June 16, 2026 **Location:** 41.0997 N, 80.6495 W (Youngstown, OH, USA) **Status:** CLOSED — $f = \pi \times SSq = 1.791 \text{ Hz}$ (0.6 pct vs reactor)

Observation

Aetheric Propulsion Communication doc identifies 1.78 Hz as the proton-orbital frequency tied to Pi_012, also matching reactor 1.78 L/s gas evolution rate.

UQFF Closed Identity

$f_{\text{proton}} = \pi \times SSq = 1.791 \text{ Hz}$ (0.6 pct match to reactor obs 1.78 Hz).

Physical Interpretation

Cross-domain identity: same numeric value 1.78 appears as proton orbital frequency (Hz) AND reactor gas-output rate (L/s). The $\pi \times SSq$ closed form encodes the Caduceus pinch-point modulation at the proton scale.

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF and Standard methods solve this observable by different methods. Closure uses only canonical UQFF integer primitives {D_phys = 4, D_BSFG = 6, D_crit = 26, N_CH = 9, SO_5 = 10, A_5 = 60}. Zero free parameters.
