

PAPER_1478 — UQFF: Reactor Self-Powered 3 RPM Minimum (Bucket H)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Bucket H — derived from F:/Aetheric Propulsion source material **Date:** June 16, 2026 **Location:** 41.0997 N, 80.6495 W (Youngstown, OH, USA) **Status:** CLOSED — $\text{RPM}_{\min} = D_{\text{phys}} - 1 = 3$ EXACT; $f_{\min} = F_{\text{TRZ}}/2 = 0.05$ Hz EXACT

Observation

Star-Magic reactor sustains a minimum 3 RPM self-powered (0.05 Hz) operation.

UQFF Closed Identity

$\text{RPM}_{\min} = D_{\text{phys}} - 1 = 4 - 1 = 3$ EXACT; $f_{\min} = F_{\text{TRZ}}/2 = 0.1/2 = 0.05$ Hz EXACT.

Physical Interpretation

The 3-RPM floor encodes the $(D_{\text{phys}} - 1)$ -generation structural minimum, paralleling SU(3) color and 3-flavor neutrino identities. The 0.05 Hz frequency is $F_{\text{TRZ}}/2 = 1/(2 \text{ SO}_5)$.

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF and Standard methods solve this observable by different methods. Closure uses only canonical UQFF integer primitives $\{D_{\text{phys}} = 4, D_{\text{BSFG}} = 6, D_{\text{crit}} = 26, N_{\text{CH}} = 9, \text{SO}_5 = 10, A_5 = 60\}$. Zero free parameters.
