

PAPER_1479 — UQFF: Level-13 Black Hole Radius (Bucket G)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Bucket G — derived from F:/Aetheric Propulsion source material **Date:** June 16, 2026 **Location:** 41.0997 N, 80.6495 W (Youngstown, OH, USA) **Status:** CLOSED — $r_{BH} = SO_5^5 = 1e5 \text{ m EXACT}$; $V_{BH} = \frac{4}{3} \pi r^3$

Observation

Universal Inertia doc places level-13 BH at radius $r = 1e5 \text{ m}$ with V_{BH} approximately $4.19e15 \text{ m}^3$.

UQFF Closed Identity

$r_{BH}(\text{level } 13) = SO_5^{(D_{phys}+1)} = SO_5^5 = 1e5 \text{ m EXACT}$; $V_{BH} = (\frac{4}{3}) \pi r^3 = 4.19e15 \text{ m}^3$.

Physical Interpretation

The $13 = D_{crit}/2$ level corresponds to the half-spectrum BH radius. The $SO_5^5 = 1e5 \text{ m}$ identity scales the BH event horizon to a structurally-canonical 100 km.

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF and Standard methods solve this observable by different methods. Closure uses only canonical UQFF integer primitives $\{D_{phys} = 4, D_{BSFG} = 6, D_{crit} = 26, N_{CH} = 9, SO_5 = 10, A_5 = 60\}$. Zero free parameters.
