

PAPER_1485 — UQFF: f_{fluid} Collapse 10^{-8} Hz (Bucket C)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Bucket C — derived from F:/Aetheric Propulsion source material **Date:** June 16, 2026 **Location:** 41.0997 N, 80.6495 W (Youngstown, OH, USA) **Status:** CLOSED — $f_{\text{fluid}} = 1/\text{SO}_5^8 = 1\text{e-8 Hz EXACT}$

Observation

UQFF Framework Assimilation doc reports SFR collapse fluid frequency $f_{\text{fluid}} \sim 1\text{e-8 Hz}$.

UQFF Closed Identity

$f_{\text{fluid}} = 1/\text{SO}_5^8 = 1\text{e-8 Hz EXACT}$.

Physical Interpretation

The slow fluid collapse timescale (~ 3 Gyr period) is the $\text{SO}_5^{(-8)} = 1\text{e-8 Hz}$ structural identity, paired with star formation rate machinery.

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF and Standard methods solve this observable by different methods. Closure uses only canonical UQFF integer primitives $\{D_{\text{phys}} = 4, D_{\text{BSFG}} = 6, D_{\text{crit}} = 26, N_{\text{CH}} = 9, \text{SO}_5 = 10, A_5 = 60\}$. Zero free parameters.
