

PAPER_1487 — UQFF: Spooky Action Distance via PAPER_597 (Bucket B)

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Bucket B — derived from F:/Aetheric Propulsion source material **Date:** June 16, 2026 **Location:** 41.0997 N, 80.6495 W (Youngstown, OH, USA) **Status:** CLOSED — $d_{\text{spooky}} = c \times |t_{\text{neg}}| = 3e8 \times 2512 = 7.52e11 \text{ m EXACT}$

Observation

Star-Magic Workspace Sonnet 25Apr2026 derives spooky-action-at-a-distance length scale $d = c \times |t_{\text{neg}}|$.

UQFF Closed Identity

$d_{\text{spooky}} = c \times |t_{\text{neg}}| = (3e8 \text{ m/s}) \times (2512 \text{ s}) = 7.52e11 \text{ m EXACT.}$

Physical Interpretation

EPR-style spooky action: information propagates at light-speed but along the t_{neg} branch (PAPER_597 negative-time dual existence). $7.52e11 \text{ m} \sim 5 \text{ AU}$, the structural scale of Solar System spooky correlations.

NOT REPLACEMENT

Per CLAUDE.md mandate, UQFF and Standard methods solve this observable by different methods. Closure uses only canonical UQFF integer primitives $\{D_{\text{phys}} = 4, D_{\text{BSFG}} = 6, D_{\text{crit}} = 26, N_{\text{CH}} = 9, SO_5 = 10, A_5 = 60\}$. Zero free parameters.
