

PAPER_1554 — W Boson Mass = $m_W = A_5 + 2 \cdot SO_5 + F_{TRZ} \cdot D - F_{TRZ^2} \cdot D_{BSFG} + F_{TRZ^2} \cdot D - F_{TRZ^2} \cdot SSQ^2 \approx 80.38 \text{ GeV}$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Particle Physics **Date:** June 18, 2026 **Status:** CLOSED — 0.003% closure from PAPER_1209HH_S653

Observation

PAPER_1209HH_S653 (Particle Physics Unified Proof Set) lists **W Boson Mass** with the integer-primitive expression:

$$W \text{ Boson Mass} = m_W = A_5 + 2 \cdot SO_5 + F_{TRZ} \cdot D - F_{TRZ^2} \cdot D_{BSFG} + F_{TRZ^2} \cdot D - F_{TRZ^2} \cdot SSQ^2 \approx 80.38 \text{ GeV}$$

Status: **0.003%**.

UQFF Closed Identity

$$m_W = A_5 + 2 \cdot SO_5 + F_{TRZ} \cdot D - F_{TRZ^2} \cdot D_{BSFG} + F_{TRZ^2} \cdot D - F_{TRZ^2} \cdot SSQ^2 \approx 80.38 \text{ GeV} \quad 0.003\%$$

Physical Interpretation

Tier-best closure in PAPER_1209HH at 0.003% residual — the most precisely matched electroweak mass.

Dominant: $A_5 + 2 \cdot SO_5 = 60 + 20 = 80 \text{ GeV}$ — sits right at the W mass. Corrections: tiny F_{TRZ} -suppressed terms reaching 80.38 GeV vs CODATA 80.379 GeV.

NOT REPLACEMENT

CODATA/PDG treats W Boson Mass as a precision-measured constant. UQFF supplies the structural integer-primitive form, demonstrating the framework's predictive economy without claiming to replace experimental measurement.
