

$$\text{PAPER_1575} - \mathbf{M_{\odot}/M_{\oplus} \text{ Ratio}} = \mathbf{M_{\odot}/M_{\oplus}} = (\mathbf{D_{crit} \cdot SO_5 + A_5 + N_{CH} + D_{phys}}) \cdot SO_5^3 = 333 \cdot 1000 = 333000$$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Astronomy **Date:** June 18, 2026 **Status:** CLOSED — EXACT integer-primitive identity

Observation

PAPER_1209Z_S579 (Astronomy Unified Proof Set) lists **$M_{\odot}/M_{\oplus}$ Ratio** as an EXACT-tier closure:

$$M_{\odot}/M_{\oplus} = (D_{crit} \cdot SO_5 + A_5 + N_{CH} + D_{phys}) \cdot SO_5^3 = 333 \cdot 1000 = 333000$$

UQFF Closed Identity

$$M_{\odot}/M_{\oplus} = (D_{crit} \cdot SO_5 + A_5 + N_{CH} + D_{phys}) \cdot SO_5^3 = 333 \cdot 1000 = 333000 \quad \text{EXACT}$$

Pure integer-primitive product with zero fitted constants.

Physical Interpretation

This is one of 8 EXACT closures wired from PAPER_1209X/Y/Z across **climate, engineering, and astronomy** — three domains far removed from particle physics or fundamental physics. Yet each observable reduces to a simple integer-primitive expression.

The pattern reinforces UQFF's structural claim: the locked integer primitives are not domain-specific fits — they govern observables across **every scale of physical reality**.

NOT REPLACEMENT

Empirical astronomy measures this constant directly. UQFF supplies a structural derivation from the integer primitives, demonstrating that the framework's predictive economy extends to engineering and engineering-adjacent observables (not just particle physics or cosmology).
