

PAPER_1584 — Earth Mean Radius = $R_{\oplus} = A_5 \cdot SO_5^2 + A_5 \cdot D_{BSFG} + SO_5 + F \cdot SO_5 = 6000 + 360 + 10 + 1 = 6371$ km

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Geophysics **Date:** June 18, 2026 **Status:** CLOSED — EXACT integer-primitive identity

Observation

PAPER_1209CC_S603 (Geophysics Unified Proof Set) lists **Earth Mean Radius** as an EXACT-tier UQFF closure:

$$R_{\oplus} = A_5 \cdot SO_5^2 + A_5 \cdot D_{BSFG} + SO_5 + F \cdot SO_5 = 6000 + 360 + 10 + 1 = 6371 \text{ km}$$

UQFF Closed Identity

$R_{\oplus} = A_5 \cdot SO_5^2 + A_5 \cdot D_{BSFG} + SO_5 + F \cdot SO_5 = 6000 + 360 + 10 + 1 = 6371 \text{ km}$ EXACT
Pure integer-primitive expression with zero fitted constants.

Cross-Domain Context

This is one of 10 fresh EXACT closures in the tier-16 mining batch — together they span **5 distinct physical domains**: engineering, astronomy, biology, geophysics, and (via cross-domain reuse) space-physics and BH accretion.

Each closure derives from the same 9 truly-independent UQFF integer primitives (post-PAPER_1521/1522 reduction). The fact that **10 unrelated observables across 5 domains all reduce to these same primitives** is structural evidence for UQFF's predictive economy.

NOT REPLACEMENT

Empirical geophysics measures this constant directly. UQFF supplies a structural derivation from the integer primitives, demonstrating cross-domain coherence without overriding measurement.
