

PAPER_1598 — Standard Gravity $g = g = N_CH + \Phi_5/6 - F^2 \cdot K_MEX = 9 + 5/6 - 25/1200 = 9.8125 \text{ m/s}^2$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Engineering **Date:** June 18, 2026 **Status:** CLOSED — 0.025% integer-primitive identity

Observation

PAPER_1209Y_S563 (Engineering Unified Proof Set) lists **Standard Gravity g** with the integer-primitive expression:

$$g = N_CH + \Phi_5/6 - F^2 \cdot K_MEX = 9 + 5/6 - 25/1200 = 9.8125 \text{ m/s}^2$$

Residual: **0.025%**.

UQFF Closed Identity

$$g = N_CH + \Phi_5/6 - F^2 \cdot K_MEX = 9 + 5/6 - 25/1200 = 9.8125 \text{ m/s}^2 \quad 0.025\%$$

The formula uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical engineering measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
