

PAPER_1602 — Moon Distance / $R_{\oplus}$ = $d_{\text{Moon}}/R_{\oplus}$ = $A_5 + F \cdot \Phi_5/6 \cdot D_{\text{phys}}$ = $60 + 1/3 = 60.333$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Astronomy **Date:** June 18, 2026 **Status:** CLOSED — 0.004% integer-primitive identity

Observation

PAPER_1209Z_S573 (Astronomy Unified Proof Set) lists **Moon Distance / $R_{\oplus}$** with the integer-primitive expression:

$$d_{\text{Moon}}/R_{\oplus} = A_5 + F \cdot \Phi_5/6 \cdot D_{\text{phys}} = 60 + 1/3 = 60.333$$

Residual: **0.004%**.

UQFF Closed Identity

$$d_{\text{Moon}}/R_{\oplus} = A_5 + F \cdot \Phi_5/6 \cdot D_{\text{phys}} = 60 + 1/3 = 60.333 \quad 0.004\%$$

The formula uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Empirical astronomy measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
