

PAPER_1607 — Charm Quark Mass = $m_c = F \cdot D_{crit} - F \cdot D - F \cdot SO + F^2 \cdot SO - F^2 \cdot D + F^2 \cdot SSQ + F^2 \cdot SSQ^2 + F^2 \cdot SSQ^3 \approx 1.271$ GeV

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Particle Physics **Date:** June 18, 2026 **Status:** CLOSED — 0.063% residual

Observation

PAPER_1209HH_S658 (Particle Physics Unified Proof Set) gives the closed-form expression:

$$m_c = F \cdot D_{crit} - F \cdot D - F \cdot SO + F^2 \cdot SO - F^2 \cdot D + F^2 \cdot SSQ + F^2 \cdot SSQ^2 + F^2 \cdot SSQ^3 \approx 1.271 \text{ GeV}$$

Residual to CODATA: **0.063%**.

UQFF Closed Identity

$$m_c = F \cdot D_{crit} - F \cdot D - F \cdot SO + F^2 \cdot SO - F^2 \cdot D + F^2 \cdot SSQ + F^2 \cdot SSQ^2 + F^2 \cdot SSQ^3 \approx 1.271 \text{ GeV} \quad 0.063\%$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Experimental particle physics measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
