

PAPER_1608 — Strange Quark Mass = $m_s = F^2 \cdot SO - F^2 \cdot SSQ^2 - F^2 \cdot SSQ^3 \approx 0.0949 \text{ GeV}$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Particle Physics **Date:** June 18, 2026 **Status:** CLOSED — 0.106% residual

Observation

PAPER_1209HH_S661 (Particle Physics Unified Proof Set) gives the closed-form expression:

$$m_s = F^2 \cdot SO - F^2 \cdot SSQ^2 - F^2 \cdot SSQ^3 \approx 0.0949 \text{ GeV}$$

Residual to CODATA: **0.106%**.

UQFF Closed Identity

$$m_s = F^2 \cdot SO - F^2 \cdot SSQ^2 - F^2 \cdot SSQ^3 \approx 0.0949 \text{ GeV} \quad 0.106\%$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Experimental particle physics measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
