

PAPER_1615 — Pb-208 Binding Energy per A = Pb-208 BE/A = $F \cdot K^5 + \beta + \beta^2 - F \cdot \beta^3 + 3 \approx 7.869 \text{ MeV}$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Nuclear **Date:** June 18, 2026 **Status:** CLOSED — 0.020% residual

Observation

PAPER_1209II_S670 (Nuclear Unified Proof Set) gives the closed-form expression:

$$\text{Pb-208 BE/A} = F \cdot K^5 + \beta + \beta^2 - F \cdot \beta^3 + 3 \approx 7.869 \text{ MeV}$$

Residual to AME2020: **0.020%**.

UQFF Closed Identity

$$\text{Pb-208 BE/A} = F \cdot K^5 + \beta + \beta^2 - F \cdot \beta^3 + 3 \approx 7.869 \text{ MeV} \quad 0.020\%$$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

NOT REPLACEMENT

Experimental nuclear measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
