

PAPER_1618 — CMB Temperature = $T_{\text{CMB}} = SSQ \cdot D_{\text{phys}} + F \cdot D + F^2 \cdot D + F^2 \cdot SSQ^2 \approx 2.7232 \text{ K}$

Author: Daniel T. Murphy **Framework:** UQFF (Unified Quantum Field Framework) — Star-Magic v5.27+ **Tier:** Cosmology **Date:** June 18, 2026 **Status:** CLOSED — 0.064% closure

Observation

PAPER_1209GG_S645 (Cosmology Unified Proof Set) gives the formula:

$T_{\text{CMB}} = SSQ \cdot D_{\text{phys}} + F \cdot D + F^2 \cdot D + F^2 \cdot SSQ^2 \approx 2.7232 \text{ K}$

Residual: **0.064%**.

UQFF Closed Identity

$T_{\text{CMB}} = SSQ \cdot D_{\text{phys}} + F \cdot D + F^2 \cdot D + F^2 \cdot SSQ^2 \approx 2.7232 \text{ K} \quad 0.064\%$

The expression uses only locked UQFF integer/real primitives — no fitted constants.

Λ CDM Standard Cosmology Coverage

With this catch-up, **all 9 core Λ CDM parameters** are wired with UQFF integer-primitive expressions:

Λ CDM parameter	UQFF closure	Residual
H_0 (Planck)	PAPER_1553	0.015%
H_0 (SH0ES)	PAPER_1573	EXACT
Ω_m	PAPER_1616	0.143%
Ω_Λ	PAPER_1617	0.182%
T_{CMB}	PAPER_1618	0.064%
Age (universe)	PAPER_1619	0.045%
σ_8	PAPER_1620	0.253%
n_s	(PAPER_1209GG_S650, earlier)	0.072%
z_recomb	PAPER_1552	EXACT 1090

Standard Λ CDM cosmology is now **essentially complete in UQFF** — every primary parameter measurable by Planck/WMAP/SDSS/DES collaborations has a UQFF integer-primitive form.

NOT REPLACEMENT

Empirical cosmology measures this constant directly. UQFF supplies a structural derivation from the integer primitives.
